BRINGING COMMUNITY PARTNERS TOGETHER TO ADDRESS UNSPOKEN REALITIES OF CHRONIC DISEASE, DIABETES AND FOOD INSECURITY

Registered Dietitian Nutritionists, do you ever wonder what happens to your patients after they leave the office? Do they have the resources to get the foods you recommended? Emergency food organizations, are you seeing those same patients struggle to improve their health or manage a chronic disease due to financial hardships?

Food insecurity is a substantial public health issue, affecting 42 million people in the United States and the health of everyone in those households. In this webinar, you will hear real world experiences of a dietitian screening for food insecurity and connecting patients with food resources, and new ideas for food pantries to help patients/clients manage chronic disease and improve their overall health.

Join us on November 15 to discuss how to develop partnerships and strategies with other resources offered in your community through the national network of Cooperative Extension, Feeding America affiliated food banks, food pantries and other emergency feeding partners, public health departments and health care providers.
